

## Caesar Creek State Park, Emergency Spillway Fossil-Collecting Site

From: D.L. Shrake, *Excursion to Caesar Creek State Park in Warren County, Ohio: A Classic Ordovician Fossil-Collecting Locality*, Guidebook No.12, Ohio Department of Natural Resources, 1992 (prepared for the Geological Society of America Annual Meeting, 1992)

**Common Fossils at the Caesar Creek State Park Collection Site**

**Trilobites (pieces of shed exoskeleton are often found)**

**Brachiopods (“lamp shells” – have two uneven shells with beak)**

**Crinoids (“sea lilies” – separated discs and columns are usually found)**

**Horn Corals** (found in clusters in several locations)

**Gastropods** (marine snails with single coiled shells)

**Bryozoans** (“lace coral” – often seen as pieces of “stems”)

**Cephalopods (squid-like straight-shelled nautiloids)**

**Bivalves (always two identical shells joined along a hinge line)**

**Limestone slabs with fossils, Caesar Creek State Park**
